

Laiya Wang

Lightsview, SA 5085 | 0416 035 024 | wanglaiya11011101@gmail.com | [linkedin.com/in/laiya-wang](https://www.linkedin.com/in/laiya-wang) | Open to relocation: Melbourne, Sydney, Brisbane

OBJECTIVE

IT graduate and hands-on technician with practical experience in hardware troubleshooting, Linux and Windows system administration, network fundamentals, and production device management. Proven ability to maintain high system reliability under operational pressure — sustained 99.9% uptime across 50+ production devices at Liven through disciplined fault diagnosis and proactive maintenance. Passionate about IT infrastructure and eager to contribute to AWS data centre operations, applying strong technical fundamentals, a safety-first mindset, and a systematic approach to hardware diagnostics, configuration, and equipment lifecycle management.

EDUCATION & CERTIFICATIONS

Bachelor of Information Technology (Software Development) Conferred Oct 2025 | GPA 5.06

University of South Australia | ACS Accredited | Bachelor of Information Technology

• Cloud Platforms (INFT 2066) (2025)	Distinction
• Cloud and Concurrent Programming (INFT 3043) (2024)	High Distinction
• AI and Machine Learning (COMP 2019) (2024)	High Distinction
• Database for the Enterprise (INFS 2011) (2024)	Distinction
• Design Patterns with C++ (COMP 3023) (2025)	Distinction
• Security Foundations (INFS 3086) (2024)	Credit
• Network Fundamentals (INFT 1012) (2022)	Credit
• Data Structures Essentials (COMP 2012) (2023)	Credit

Microsoft Azure Fundamentals (AZ-900) | Microsoft Certified

- Demonstrates validated understanding of cloud concepts, Azure core services, security, compliance, and pricing — skills transferable across cloud platforms including AWS

Computer Hardware Basics | Cisco Networking Academy Apr 2026

- Proficient in installing, repairing, and upgrading PC components (CPU, RAM, HDD/SSD, power supplies, peripherals); device preventive maintenance and inspection; laptop and mobile device hardware; fire and general safety standards — directly applicable to data centre hardware operations

Hardware and Upgrade Support | Cisco Networking Academy Apr 2026

- Certified in systematic hardware troubleshooting methodology: identifying port and cable types, diagnosing component faults, determining root causes, safely performing component replacement and upgrades — aligned with AWS DC technician diagnostics responsibilities

Google IT Support Professional Certificate | Coursera (Google) Apr 2026

- Completed all 6 courses covering: hardware fundamentals, networking (TCP/IP, DNS, DHCP, VPN), Linux and Windows OS administration, system and IT infrastructure management, and IT security — providing comprehensive foundational knowledge directly aligned with AWS data centre operations and security practices

TECHNICAL SKILLS

Cloud & AWS	AWS Lambda, EC2, RDS, IAM, S3, VPC; High Availability, Fault Tolerance, Scalability, Resilience; AWS Well-Architected Framework; Azure (AZ-900 certified, Logic Apps, Service Bus, Entra ID)
Languages	Python, C#, TypeScript, JavaScript, SQL — daily use across consulting and teaching roles
Networking & OS	PC component installation & upgrade (RAM, HDD/SSD, PSU, peripherals); hardware fault diagnosis & root cause analysis; Linux & Windows system administration; TCP/IP, DNS, VPN, Wi-Fi configuration; device preventive maintenance; storage media sanitisation; fire & electrical safety standards

Databases	MySQL, SQL Server (relational); Firebase (NoSQL); Oracle SQL; Entity Framework ORM
Frameworks	ASP.NET Core, React, Next.js, Node.js
DevOps & Tools	Docker, Git, GitHub, Postman, Azure DevOps, Power Automate, CI/CD pipelines (PowerShell)
Architecture	Microservices, REST APIs, Integration Patterns, Cloud Migration Planning, High Availability Design, Cost Optimisation

PROFESSIONAL EXPERIENCE

Technical Consultant & Architecture Associate | *S4G Consulting / DHS South Australia, Adelaide* Jul 2025 – Present

- Supported digital transformation initiatives across South Australian Government agencies (DHS SA, Super SA, Concessions SA), translating customer business requirements into scalable, cost-effective technical solutions
- Supported design of a multi-cloud interoperability model connecting Azure Enterprise Data Platform with Salesforce, GCP, and AWS — applying high availability, resilience, and fault-tolerant architecture principles
- Authored integration pattern libraries (REST API, file transfer, partner ingestion) and reusable architecture standards, helping align technical solutions with customer and end-user business outcomes
- Designed serverless architectures using AWS Lambda, API Gateway, and S3; applied IAM and VPC design principles to support secure, scalable, and fault-tolerant environments
- Re-architected full-stack workflows from Docker to AWS Lambda, achieving 40% infrastructure cost reduction; evaluated automation tools (N8N vs Power Automate) with clear cost-benefit analysis to recommend best-fit solutions
- Presented High-Level Design diagrams to board and executive stakeholders; supported Super SA IAM discovery workshops evaluating identity platforms for 100,000+ members, communicating complex technical options clearly to non-technical audiences

Academic Tutor — Cloud, Databases & Programming | *Adelaide University (UniSA), Adelaide* Jul 2025 – Present

- Tutor four courses simultaneously: INFO2004 Cloud Platforms (AWS VPC, EC2, scalable architecture, cost-optimised infrastructure design), COMP2021 Software Development Practice (C#, OOP, data structures, algorithms, Big O analysis), COMP1004 Engineering Programming (Python, pandas, data analysis and visualisation), and COMP1002 Problem Solving and Programming (algorithmic thinking, debugging, coding standards)
- Design practical lab exercises for INFO2004 that require students to evaluate, select, and implement AWS cloud services against real organisational requirements — including VPC design, multi-region deployments, and cost-justification reports
- Mentor students in COMP2021 through data structure selection (arrays, lists, trees, hash tables, graphs), algorithm performance analysis, and C# collection classes — developing rigorous systematic problem-solving skills
- Consistently achieve high student satisfaction through clear, structured communication of complex technical concepts to diverse audiences

DevOps Support | *Liven, Adelaide*

Apr 2022 – Feb 2024

- Administered and maintained Linux and Windows environments across 50+ production merchant kiosk devices, sustaining 99.9% uptime through proactive monitoring, systematic fault diagnosis, and preventive maintenance routines
- Diagnosed and resolved a wide range of hardware and software technical issues — troubleshooting kiosk failures, configuring Wi-Fi connectivity, managing backend device updates, and adjusting system settings — ensuring minimal disruption to customer operations
- Managed merchant portal access and security: facilitated secure client onboarding, provided expert consultation on portal configuration and customisation, and resolved access issues to ensure seamless merchant experience
- Delivered face-to-face and remote customer support — identifying customer needs, resetting credentials, updating store listings, and providing product guidance — developing strong customer-facing communication skills

KEY PROJECTS — CLOUD & ARCHITECTURE

Cloud Migration Architecture — SB Brewing (Consulting Engagement)

- Designed AWS multi-region architecture (Sydney, Ireland, Virginia) with focus on high availability, fault tolerance, and cost optimisation — applied all five AWS Well-Architected Framework pillars to a real client migration decision
- Produced board-level and detailed HLD diagrams covering VPC, subnets, Multi-AZ deployment, auto-scaling groups, DR/backup strategy, and VPN/Direct Connect — communicating technical architecture to non-technical decision makers

AI-Assisted Cloud Assessment Tool (HTML + Anthropic Claude API)

- Built an AI-powered marking tool using the Claude Vision API and PDF.js to assess cloud migration diagrams against a 9-point AWS architecture checklist (covering scalability, resilience, IAM, cost optimisation)
- Demonstrates: serverless API integration, cloud architecture judgment, rapid prototyping — directly applicable to solution design work

Pipeline Timetable App — Native macOS Desktop Widget (Electron, React, Node.js)

- Built a frameless always-on-top timeline widget with drag-to-move, edge-resize, multi-day event segmentation, and 50-state undo/redo using React 18, Vite, Tailwind CSS, and @dnd-kit
- Implemented an Express + Google OAuth 2.0 backend integrating the Google Calendar API for multi-account sync and unified event rendering across calendars
- Integrated Electron system tray, global keyboard shortcuts, encrypted local storage (electron-store), and iCal (.ics) export for Apple Calendar and Outlook interoperability
- Established E2E testing pipeline with Playwright and automated macOS packaging (DMG/ZIP) via electron-builder; actively in Stage 2 development with further features in progress

AWS & CLOUD EXPERTISE

- Certified in Microsoft Azure Fundamentals (AZ-900) — validated cloud concepts including compute, storage, networking, security, and cost management; skills directly transferable to AWS architecture
- Practical AWS experience: designed architectures using Lambda (serverless), EC2 (compute), RDS (managed databases), IAM (identity & access), S3 (object storage), VPC (networking & security)
- Applied AWS Well-Architected Framework across real projects: Operational Excellence, Security, Reliability, Performance Efficiency, Cost Optimisation
- Instructs INFO2004 Cloud Platforms (AWS) to university students — teaching VPC design, cloud service selection, scalable and cost-optimised architecture, and on-premises to cloud migration — applying and reinforcing deep AWS knowledge as a teaching practitioner
- Bilingual (English/Mandarin) — effectively communicates technical solutions to diverse customer audiences

AVAILABILITY & ELIGIBILITY

- Available to commence immediately for full-time employment
- Holds a valid Australian driver's licence with own vehicle — able to travel between sites as required by the role
- Australian-based (Adelaide, SA); open to relocation to Sydney, Melbourne, or Brisbane
